Chapter 1 - Introduction

1.1 - Purpose

This is an informative supplement to XML CVE Encoding Specification for ISM Country Codes and Tetragraphs (ISMCAT.CES) as a human readable document.

The membership tables are sorted alphabetically by the country code for the convenience of readers. The underlying taxonomy file has no ordering inherent to it. Similarly the document is sorted by the tetragraph's token purely for the reader's convenience.

1.2 - Overview

Chapter 2 is a listing of each tetragraph and their membership countries in table format. Each section includes the date for which the membership was last verified.

1.3 - Descriptive information

- Description: Tetragraph Taxonomy: Alpha-sort by Tetragraph

Chapter 2 - Current Tetragraph Taxonomy Mapping

This is a mapping of the countries that have membership in each tetragraph.

Each tetragraph/token specifies classification information and whether its membership is decomposable. Decomposition in this case refers to the breaking down of the membership into its component members for the purposes of rollup. An example is decomposing FVEY into the five member countries: USA, AUS, CAN, GBR, and NZL. This decomposition allows a portion marked RELEASABLE TO USA, GBR and another portion marked RELEASABLE TO USA, FVEY to rollup to RELEASABLE TO USA, GBR. If FVEY was not decomposable the rollup would have to have been NF.

2.1 - ACGU

The tetragraph ACGU stands for: FOUR EYES.

The overall classification of the Tetragraph Token and its membership as shown is UNCLASSIFIED.

This tetragraph is DECOMPOSABLE.

Chapter 3 - Legacy, deprecated Tetragraph Taxonomy Mapping

This is a mapping of the countries that should have access to Legacy tetragraph marked data. The countries listed are not necessarily the original membership, they are the countries show on the Partner Engagement site (<https://intellipedia.intelink.ic.gov/wiki/Portal:Tetragraphs>) as authorized for access now. These markings are no longer valid to use on current data. This mapping is intended to facilitate remarking for further dissemination or use.

Each tetragraph/token specifies classification information. Decomposition of legacy, deprecated Tetragraphs is not applicable since they are no longer authorized for use in documents so any document with them would fail ISM validation.
